

# The Brain Installations

## **Hypnagogia**

Titouan Millet, Martin Reiche, Luke Spierewka, 2015

Hypnagogia is an interactive installation that explores the geography of a dreaming digital brain. Created during “The Brain – Open Lab” residency program in February 2015 in Berlin, Hypnagogia uses the metaphors of connectedness and archival to create a dream-like psychedelic environment that the player can influence through an analog-synthesizer-inspired panel. Each unique world created and altered can be preserved on a floppy disk given to the player.
